

**Montanus horse feed**

# MONTANUS Fohlenstarter

**For healthy and strong foals.**

Montanus Fohlenstarter is fed as first supplementary feed together with hay. It is designed for the age of 4-6 weeks to the end of the first year of life. Montanus Fohlenstarter is also suitable as supplementary feed to the basal ration for prenatal preparation of mares

**It's not only tasty – it is also easily digestible.**

Montanus Fohlenstarter supplies the need of growing foals in high-value protein by components like toasted and extracted soya and dried yeast. Needs-based contents of essential amino acids support the constitution of muscular mass.

Tasty, expanded energy components like cookie meal, apple pomace, apple molasses and dried sugarbeet pulp ensure energy provision and provide for an early feed intake.

Mucilages from expanded linseed cover the mucous membranes of the gastro-intestinal tract like a protective film. The contained Omega-3 fatty acids support not only the immune system but also the constitution of skin and mucous membranes. a yeast strain can support microbial digestion in the blind gut and strengthen the natural gut flora.

Minerals and micronutrients are contained in balanced concentration. In

the first rearing year special attention is turned to the contents of calcium, phosphor and magnesium for a stable formation of bones and muscles. A sufficient provision of vitamin D3

supports the absorption of calcium and phosphor into the skeleton.

With mares the liposoluble vitamins accumulate in the colostrum and are available for the foal in the first days of life.

Foals cannot synthesize B-vitamins due to their incompletely developed gut flora. Thus they have to be ingested via feed. B-vitamins are mainly needed for the carbohydrate metabolism.

Micronutrients are available in organic form (chelate), by which absorption is increased. Provision deficiencies are remedied and the formation of viscera as well as the body's defences, fitness and well-being are supported.

**Feeding recommendation:**

Foals up to 1.5 kg/day  
Mares 1-3 kg/day

**Analysis:**

18,0	%	Crude protein
3,5	%	Crude fat
7,5	%	Crude fibre
8,0	%	Crude ash
12,4	MJ	Digestible energy
1,2	%	Calcium
0,6	%	Phosphor
0,4	%	Sodium

**Composition:**

Wheat, soya bean, dehulled, extracted, toasted, apple pomace, dried sugar beet pulp, apple molasses, products and byproducts of the baking and pastry industry, wheat feed, linseed, expanded, wheat, expanded, calcium carbonate, monocalcium phosphate, dried yeast (D-V XP), dextrose, magnesium oxide, sodium chloride

Ref. No. 0447

Content: 25 kg

# BERGIN Leinex Plus

High-energy supplementary feed with linseed and omega-3 fatty acids for breeding and high-performance horses.

Quickly available energy from high-value expanded components.

Omega-3 fatty acids are not only important for infection defence and fertility, but also for the constitution of skin and mucous membranes. Furthermore, they have effect on elasticity of cell and vascular walls.

Fibre and mucilages from linseed support steady digestion and well-being, especially with sensitive horses.

**Analysis:**

15,0	%	Crude protein
18,5	%	Crude fat
4,0	%	Crude fibre
3,5	%	Crude ash

**Composition:**

Apple pomace, dried sugar beet pulp, wheat feed, wheat, products and byproducts of the baking and pastry industry, apple molasses, linseed, expanded, wheat, expanded, calcium carbonate, sucrose, monocalcium phosphate

Ref. No. 0171

Content: 25 kg

## MONTANUS Pferde L

### Supplementary feed to partially or totally replace oat.

Tasty supplementary feed without oat, to enhance energy content in the ration and to close protein gaps. Ideal during training or competition phase and respectively during gravity.

The pellet contains easily digestible energy from starch, sugar and linseed oil, which is quickly available for high performances. Expanded grain and extruded linseed, as well as well digestible fibre (high-pectin apple pomace) provide for good digestibility, even with horses with a sensitive digestion.

Feeding recommendation:  
up to 6 kg / day

Furthermore, Montanus Pferde L provides important minerals and micro-nutrients and thus supports a stable bone structure and shiny fur. The contained vitamins (...) strengthen the immune system and the growth of robust hooves.

The dust-free pellets are easy to dose and are also suitable for sensitive horses.

# MONTANUS Kräutermüsli

## Fresh herbs – fresh taste.

Feed concentrate to supplement feed concentrate portions.

MONTANUS Kräutermüsli is not only tasty and aromatic, but also positive for the respiratory tract.

Valuable herbs encourage even anorectic horses to eat. The ideal supplement for sensitive horses, or horses which tend to respiratory diseases. To support metabolism, Montanus Kräutermüsli is also recommendable during spring and autumn and respectively with old or sensitive horses. The carefully chosen herbs in Montanus Kräutermüsli (parsley, rosemary,

coriander, stinging nettle, thyme, basil, peppermint, garlic) take due to their substances (tanning agents, mucilages, bitters and essential oils) positive effect on sanguification, digestive and respiratory system and the body's defence mechanism.

Horses get further support by the lipo- and water-soluble vitamins. Moreover linseed, high in mucilages, dietary fibre and omega-3 fatty acids, supports cell renewal, hair growth and well-being. Result are a bright fur and a full mane.

Soaked in water, the essential oils unfold an enjoyable steam.

Large horses	1 - 2 kg /day
Ponys	0,5 – 1 kg/day

### Analysis

8,9	%	Crude protein
3,0	%	Crude fat
10,0	%	Crude fibre
10,5	%	Crude ash
1,8	%	Calcium
0,4	%	Phosphor
0,8	%	Sodium

### Composition:

Barley flakes, oat hulls and bran, maize flakes, sugar beet pulp, molassed, Lucerne meal, cane sugar molasses, calcium carbonate, maize, expanded, Lucerne, dried (hay), maize, fruit (apple) pulp, dried carob chunks, sodium chloride, linseed, dried wheat bran, barley, dicalcium phosphate, parsley, rosemary, basil, coriander, peppermint, stinging nettle, garlic

Ref.No. 0430

Content: 20 kg

# MONTANUS Pferdemusli

## Basic feed concentrate for lightly worked or resting horses.

Provides your horse with all important nutrients, minerals, vitamins and micronutrients. Relieves metabolism and is suitable for all little stressed horses as supplement to grain.

The muesli is dust-free and also suitable for horses with sensitive digestive tract. The substances contained in linseed take digestion supportive effect and reduce the risk of constipation.

The equipment with vitamin A, D3 and E boosts the body's defences.

Content: 20 kg

Large horses	1 - 2 kg /day
Ponys	0,5 – 1 kg/day

# MONTANUS Pferde Pellet

**Vitaminised mineral feed for horses of all types of use.**

To supplement basal feed and grain rations. With essential vitamins, optimally digestible micronutrients and minerals. For all horses from leisure segment to high-performance: breeding stallions and mares, foals, ponys, icelandic and western horses.

Due to its wide Ca-P proportion, Montanus Pferde Pellet is ideal to balance hay and grain rations, which are poor in calcium.

Especially with preserved feed, vitamins run short. These are contained in Montanus Pferde Pellet in sufficient amount to support immune system, muscles and fitness. An adjusted dosage of the skin protection vitamin Biotin and organically bound zinc

support the formation of healthy mucous membranes as well as a shiny hair and strong, firm hooves.

Organic carriers like apple pomace and molasses, sucrose and baking products make Montanus Pferde Pellets a tasty experience for your horse.

The small pellets facilitate an exact and individual dosage, according to your horse's requirements.

Breeding horses	200 g
Riding & sport horses	150 – 200 g
Small horses	100 – 150 g
Foals and ponys	80 - 100 g

Ref.No. 0432    Content: 10/25 kg

mineral  
feed

# MONTANUS Leckmasse

## Minerals for stable and pasture

Licking material in a bucket with the minerals calcium, phosphor, sodium, magnesium. Contains the micronutrients zinc, manganese, copper, cobalt, iodine, selenium and vitamins A, D3 and E.

With pasture nutrients are often short, especially on intensely used pasture and to the end of grazing season. Also suitable for horses, which do not get fresh grass and thus receive few vitamins.

Minerals are packed in tasty carriers like apple pomace and molasses and wheat feed. A herb mixture additionally provides for tastiness.

### Analytische Bestandteile

16,0	%	Calcium
4,0	%	Phosphor
5,0	%	Magnesium
9,0	%	Sodium

### Composition:

Calcium carbonate, sodium chloride, monocalcium phosphate, apple molasses, magnesium oxide, calcium sodium phosphate, apple pomace, wheat feed

Ref.No. 0434

Content 25 kg

# Salzleckstein

## Salt brick - additional provision of sodium for stable and pasture.

Lack of sodium appears commonly with horses, especially with oat-hay rations and grazing. The requirement in sodium is heavily dependent on sweating. With labour it can rise to the 20-fold amount.

In case of need, intake usually happens spontaneously. Thus licking material for free intake are especially suitable to permanently offer a sufficient amount. Salt licks should always be offered - in addition to mineral feed.

Ref.No. 0334

Content 10 kg

### Ernährungsphysiologische Zusatzstoffe

1.000.000	IU	Vitamin A
100.000	IU	Vitamin D3
5.000	mg	Vitamin E
2.000	mg	Vitamin C
150	mg	Vitamin K3
150	mg	Vitamin B1
400	mg	Vitamin B2
300	mg	Vitamin B6
2.000	mcg	Vitamin B12

		nicotinamide
3.000	mg	Zinc as Zinc glycinate
3.000	mg	

Ref.No 0476

Content: 1 kg

# MONTANUS Biotin-Konzentrat

## Active ingredient supplementation.

Brittle or weak hooves, dull hair and lameness often result from a lack of biotin and zinc. A cure over 5 months with highly concentrated biotin effects in this case visibly better hooves.

With horses prone to hoof and skin diseases a continuous feeding is recommendable to support naturally bright fur and stable hooves. Biotin supports growth of strong and elastic hoof horn. This results in firm hoof

walls and soles, good heels and a strong frog.

Furthermore mucous membranes are less susceptible to diseases. As a positive secondary effect bright fur and magnificent mane are supported.

Montanus Biotin-Konzentrat is not only good for skin and hooves. These additives disseminate their effect: vitamins D, C and E strengthen the body's defences and skin. A high

dosage of Vitamin E (5000 mg) support structure of cardiac and skeletal muscles.

Foals and ponys	10 g / day
Small horses	20 g / day
Big horses	25 g / day

# MONTANUS Multi-Vit

**Additional short-term provision of vitamins - especially suitable for foals, with special burdens or in stressful phases.**

Vitamin A is required for epithelium protection of mucous membranes and skin and reduces susceptibility for infections. Furthermore bone structure is depending on vitamin A.

Vitamin D is important for mineralising of bones and thus of big importance for growing horses.

Vitamin E is known as antioxidant, which protects cell structure. Further

more it is important for structure and function of muscles.

B-vitamins cannot be synthesised by foals due to their partially developed gastro-intestinal flora. Especially in

the carbohydrate metabolism B-vitamins take an important role. Vitamin K is necessary for blood clotting.

Foals	5-10 ml / day
Horses	10-20 ml / day

#### Nutritional additives:

50.000	IU	Vitamin A
80	IU	Vitamin D3
50	mg	Vitamin E
25	mg	Vitamin C
2	mg	Vitamin B1
2,5	mg	Vitamin B2
1	mg	Vitamin B6
0,6	mcg	Vitamin B12
8,0	mcg	Biotin
20	mg	Calcium-D-Pantothenat
24	mg	nikotinamide
8	mg	Cholinchloride

Ref.No. 0729

Content: 500 ml

# BERGO Beta-Konzentrat

**To support fertility with breeding mares and stallions.**

Supplementary feed with concentrated beta-carotene vitamin A and E.

This balanced combination of vitamins supports a periodic and noticeable heat, mate results and a high foal rate. Furthermore the supplement takes positive effect on growth of suckling foals as well as susceptibility for diarrhoea.

With breeding stallions beta-carotene takes positive effect on maintenance

of testicular tissue and thus on sperm quality.

Beta-carotene is degraded with long-period storage. Thus lack of beta-carotene often appears in spring, shortly before mate season, when no fresh grass or hay is available.

Beta-carotene is precursor of vitamin A, which, amongst others, stimulates the synthesis of reproductive hormones.

#### Nutritional additives:

6.000	mg	Beta-Carotin
1.000.000	IU	Vitamin A
10.000	mg	Vitamin E
300	mg	Vitamin B1
150	mg	Vitamin B2
150	mg	Vitamin B6
1.125	mcg	Vitamin B12
5.000	mcg	Biotin (D-(+)-Biotin)
20	mg	Folic acid
335	mg	Calcium-D-Pantothenate
1.500	mg	nicotinamide

Ref.No. 0426

Content: 10/25 kg

Breeding mares	70 g / day (from 3 weeks before gravity)
Young mares	70 g / day (from 6 weeks before coverage)
Breeding stallions	70 g / day (during covering season )
